

Tinder is committed to keeping our community safe, and we’re proud to announce the launch of our new ID Verification feature.

As part of our ongoing commitment to user safety, we’re introducing a new feature that allows users to verify their identity. This feature is designed to help protect our community from catfishing and other forms of identity fraud. Users can now verify their identity by uploading a photo of their government-issued ID. Once verified, users will be able to see a “Verified” badge on their profile, which can help other users feel more confident in their interactions.

**Trust & Safety Product** (ID Verification) is a new feature that allows users to verify their identity. This feature is designed to help protect our community from catfishing and other forms of identity fraud. Users can now verify their identity by uploading a photo of their government-issued ID. Once verified, users will be able to see a “Verified” badge on their profile, which can help other users feel more confident in their interactions.
